Your time, a shared view.

SOCIAL / SHARED ACTIVITY TRACES

One Tower brings everyone's recorded hours into a shared picture. Completed time units become coloured activity traces, and separate columns keep each person's contributions visible—offering a common reference for noticing and discussing daily routines. Time Tokens visualises recorded activity time—not productivity.

MOBILE / ACTIVITY-BASED CONTEXTS

Personal Tokens are designed to support recording within different activity settings—from a study desk to a workout or gaming session. Flipping a token begins a one-hour session, and each checkpoint invites an active choice to continue or change. Completed time is sent automatically to the Tower, connecting individual routines with a shared display.

One hour, one block.
Nine pixels tell you which.

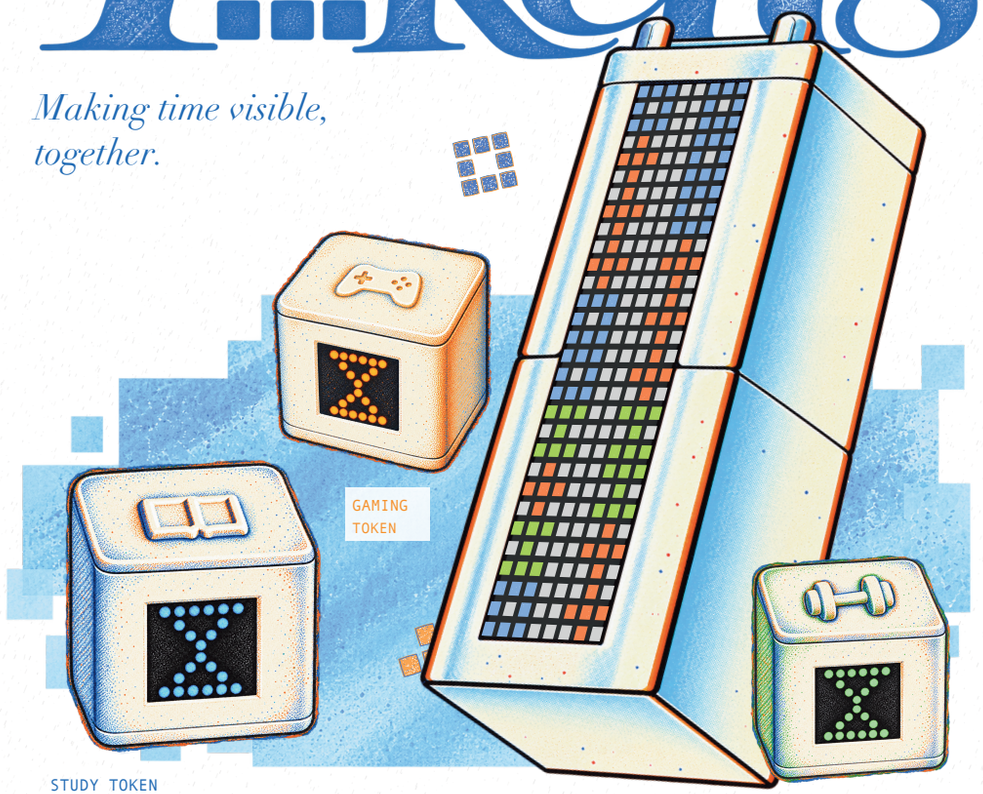
Time Tokens

Making time visible, together.



Where does your time go?

Try the token.

Time Tokens is a tangible time-awareness system connecting three activity tokens—Study, Exercise and Gaming—with a shared Time Tower.

FLIP → TRACK → TRANSFER → REFLECT & RESTART

01 Choose & Flip

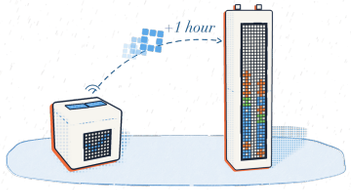
Select Study, Exercise or Gaming and flip the Token to begin.

02 Track

LED patterns show progress through a one-hour session, with feedback at completion.

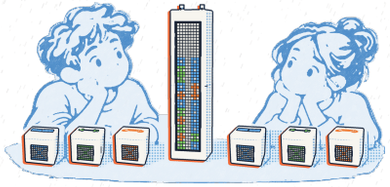
03 Transfer

Completed time units are automatically sent to the shared Tower.



04 Reflect & Restart

View accumulated records and actively choose whether to begin another session or change activities.

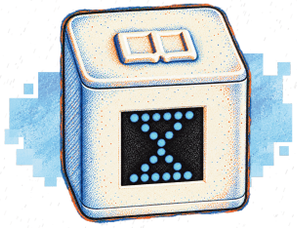


Three rhythms.

One day.

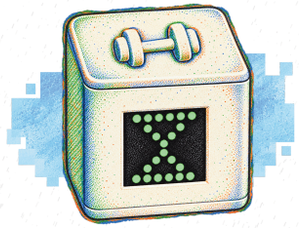
Starting with Combatting Computer Game Addiction, our research shifted towards time allocation and task prioritisation.

Rather than restricting gaming, we explored how physical time recording could help people notice their routines and reflect on everyday choices.



STUDY

Study time



EXERCISE

Exercise time

GAMING

Gaming time

TOWER SYMBOLS / THE SHARED RECORD

Two people have separate records: three columns each, with two unlit columns between.

Each 3 x 3 Tower block represents one hour.
